

We proudly carry soils, amendments, and fertilizers by G&B Organics. G&B Organics creates high quality, organic products that can help make your garden better than ever. Here are ways to use their products:

- 1) Planting in a pot or raised bed:** If you will be planting into a pot, wine barrel, box, or raised bed, you will need a mix that is light enough to allow water to move through easily, but rich in organic material. The best options for this are *Blue Ribbon Blend* or *Raised Bed Mix*.
- 2) Planting in the ground:** When planting in the ground, mix in a nutrient-rich amendment at a rate of 2/3 soil from the ground and 1/3 amendment. For general planting, use *Harvest Supreme* or *Soil Building Conditioner*. Use *Acid Planting Mix* for acid-loving plants like Maples, Dogwoods, ferns, Azaleas, Hydrangeas, and others. Use *Native Planting Mix* for California native plants.
- 3) Mulching:** To increase water retention and add extra nutrients to the soil below, try mulching with a thick layer of *Soil Building Conditioner*.
- 4) Fertilizing:** Feed your plants every 6-8 weeks from "Tax Day to Turkey Day", or whenever the temperature is regularly over 55 degrees. For new plantings, try *Starter* and for more established plants, use *All Purpose*. Other fertilizers can be used for more specific purposes (e.g. *Rose & Flower* to encourage more blooms on flowering plants)
